

SECURITY ARCHITECTURE DOCUMENT (SAD)

OPERATOR: Alexandra Blandon
DATE: 4/15/2026
TARGET: Titan Small Business Services

1. PERIMETER HARDENING

- SSH: Disabled Root Login and Password Auth.
- FIREWALL: UFW set to DEFAULT DENY. Ports 22 and 8080 ALLOWED.

2. AUTOMATED AUDITOR

Script Logic:

```
import os
disk_info = os.popen('df -h').read()
with open("/var/log/sys_audit.log", "a") as f:
    f.write(disk_info)
```

LOG PATH: /var/log/sys_audit.log

3. CONTAINER STACK

- ISOLATION: MySQL DB on internal-only network (Air-Gapped).
- WIKI: Nginx on port 8080.
- HEALTH: All containers UP and RUNNING.

4. EXECUTIVE SUMMARY

The Hardened Outpost implements a Defense in Depth strategy. Host security is enforced via SSH/UFW lockdowns. Python scripts provide system telemetry. Docker networks ensure the database is isolated from external traffic.
